PLN01	The proposed request includes 117 units with a potential density of 54.8 dwelling units per acre (DU/AC). If approved, this would be the first development of this density in the county. However, staff has several concerns regarding this level of density, which are outlined below: • Has the applicant engaged with RTD to explore potential collaboration on this project? • Have discussions been held with any small or local grocery stores to consider occupying one of the commercial spaces on the first floor, thereby reducing trips outside the site? Please provide any relevant information demonstrating how the applicant is working to secure these potential collaborations.
	Response: On 1/22/2025, Maiker emailed RTD's engineering department and received an emailed response on 1/28/2025. In effect, the RTD would "definitely be interested in working with [Maiker] on having that bus stop improved", although the current bus stop's ridership "doesn't meet the warrants for us to install and maintain a shelter at this location [ourselves]". Therefore, we believe RTD to be open to collaboration but at Maiker's expense. Potential bus stop improvements are further addressed in comment ENG06. **Maiker sees the need for a grocery option in the area and has reached out to a few local grocery options and Italian markets. While there is nothing to report at this time, we will continue ongoing efforts to find a solution—whether it be an onsite store or coordinating food deliveries. We have recently heard of Denver Housing Authority's Decatur Fresh building that has a grocery store and have reached out to DHA, as we are very interested in learning more about the structure. We believe they subsidize the grocery rent which is something Maiker could pursue.** **We do caution that in past projects, we have also had difficulty with attracting a small/local grocery store. Even small grocers require extensive logistics and loading zones that do not appear practical for this location. We are considering pursuing leads for a convenience store (which better fits the 1,622 sf space) but are hesitant as these typically offer only high-calorie**

	alternatives to meals. **(Maiker)**
PLN02	The proposed dog park under consideration for the site does not qualify as active open space. The applicant will need to provide an alternative use for the proposed area in order to meet the active open space requirement. According to the county's Land Development Code, Section 11-02-438, "Active open space" is defined as: open space that may be improved, set aside, dedicated, designated, or reserved for recreational facilities such as swimming pools, play equipment for children, ball fields, court games, picnic tables, and similar amenities. Staff recommends relocating the dog park and the proposed nature-scaped playground area. This adjustment would allocate more active space for the future residents of the area.
	Response: The applicant is not currently counting the dog park area towards the active open space requirements. In addition, the design team feels strongly this type of use is the most beneficial for future residents of the building, who are more likely a younger, single demographic with pets. The unit mix in the building is proposed as 1-2 bedrooms, targeted to working adults, not families. Given the adjacency of the space to the interstate, and the obligation to keep the billboard in this area, we strongly feel the dog park would be the best use for this area of the site, providing a usable amenity that residents will appreciate given the location, despite it not 'counting' towards open space requirements for active use. RE: Sheet L2.00 - No Change. (SSA)
PLN03	The current site plan indicates that the southern courtyard will feature a flexible open space area. Will exercise equipment be provided for residents' use on-site? Additionally, how does the applicant plan to incorporate a pickleball court into this courtyard? Please provide a revised site plan demonstrating how a pickleball court can be accommodated within the southern courtyard.
	Response: Exercise equipment will be provided at the indoor fitness area adjacent to the exterior courtyards. This equipment could be brought out to the courtyard for specific classes/events. Fixed Exercise equipment is currently not planned for the courtyard. The intent is to keep this outdoor area flexible for a variety of quieter activities such as yoga classes, lawn games, etc. **Upon additional consideration, the applicant does not feel pickleball is suitable for this courtyard due to noise concerns. This potential function has been removed from the plan notes on sheets L2.00 & A1.10. (SSA)**
PLN04	Per section 4-16-01, A photometric plan will be required to review compliance with lighting standards.
	Response: The applicant has submitted a photometric plan with this resubmittal. RE: Sheets E1.10 - E2.30 (SSA)
PLN05	The west elevation drawings show a stair leading to the northern terrace. Will this area always remain open, or will there be a gate to restrict access and keep non-residents out of the communal space? Please provide clarification.
	Response: This stair is intended for emergency egress from the South courtyard only and access will be restricted to residents only. Plan notes added to sheets A1.10 & A2.00 (SSA)
PLN06	Please include a scale bar on all maps so that staff can confirm the shown setbacks on the following pages: A 1.00 Site Plan A 1.10 Ground and Second level Plans

	A 1.20 Third and Fourth Level Plan
	Response: A graphic bar scale has been added to all sheets identified above. (SSA)
PLN07	Include a title header for all sheets of the development plans that includes the name of the project and the sheet title. Additionally, include the case number (Case No.: PRC2024-00017 on the top right corner of each sheet.
	Response: Title header including the project name and sheet title, as well as the case number, have been added to all sheets. (SSA)
PLN08	The Development plan cover sheet needs to have the following signature blocks: - Certificate of Ownership - Planning Commission Approval - Board of County Commissioners Approval: - Certificate of the clerk and recorder
	Response: The above signature blocks have been added to the cover sheet, A0.00. (SSA)

ROW1	Show the location of the reservation of easement for a concrete lined water ditch as listed in the Permitted Exceptions attached to the landowner's Special Warranty Deed. If this does not apply, please have the land surveyor coordinate with the title company to remove the exception on the submitted and updated title commitment or report.
	Response: Location call out in wrong spot. Updated ALTA provided and callout moved to correct location as shown on C1.00, C1.01, & C1.02. (R&R)
ROW2	Show the location of the right of access line ("A-line") to I-25 as defined in the Permitted Exceptions.

ROW3	Show the locations of the notes, easements and rights of way as shown on the plat of Amended Boyer Coffee Subdivision.
	Response: Callouts added on C1.00. (R&R)
ROW4	Per Item 5 of the Permitted Exceptions, there is a fence encroachment along the southwesterly property line. Please address how this will be remedied (i.e. remove or relocate fence or enter into a private fence agreement.). If the fence is CDOT's, discuss with CDOT and determine appropriate action.
	Response: Voicemail left on 1/28 with CDOT right-of-way manager requesting information on fence and access line. Coordination ongoing. Called again 2/3/25 and got their voicemail again. CDOT Denver North Residences agents have been called and voicemails left. The existing fence is proposed to be removed and a new fence installed along the southwesterly property line, callouts added on C1.00 & C1.01. (R&R)

ENG1	Property IS in Adams County MS4 Stormwater Permit area. Proposed improvements appear to disturb more than one (1) acre of ground. A Stormwater Quality (SWQ) Permit WILL be required as long as (1) acre or more of ground is disturbed, and a State Permit COR400000 WILL be required as long as one (1) acre or more of ground is disturbed. Applicant is responsible for installation and maintenance of Erosion and Sediment Control BMPs. Builder/developer is responsible for adhering to all the regulations of Adams County Ordinance 11 regarding illicit discharge. The applicant should contact Juliana Archuleta, the County's Stormwater Program Manager, to inquire about obtaining a SWQ Permit. Ms. Archuleta can be contacted at 720-523-6869 or by email at mjarchuleta@adcogov.org.
	Response: (R&R) Noted, MS4 Permit & SWQ will be completed prior to construction.
ENG2	Applicant must submit Sediment and Erosion Control plans that have been signed and stamped by a Professional Engineer licensed in the state of Colorado. Plans must also include all BMP details. See Small Construction Site Sediment and Erosion Control Guidelines, found at https://www.adcogov.org/sites/default/files/598.pdf for more information.
	Response: (R&R) BMP Detail Sheet added as C2.03 - C2.05.
ENG3	The applicant is proposing to install over three thousand square feet (3,000-sf) of impervious area on the whole project site. As such a drainage report and drainage plans in accordance to Chapter 9 of the Adams County Development Standards and Regulations (ACDSR), are required to be completed, signed, and stamped by a Professional Engineer (P.E.) licensed in the State of Colorado and submitted to Adams County for review and final approval. See Section 9-01-11 of the ACDSR for details regarding detention. Include a grading plan with the submittal to demonstrate that historic drainage will be maintained and there will be no adverse impacts on neighboring properties. Plans must also show the locations of all Erosion and Sediment Control BMPs that will be installed.
	Response: (R&R) Erosion and Sediment Control plans provided with PDP submittal as sheets C2.00, C2.01, and C2.02. Drainage Report and Plans to be provided at a later phase.
ENG4	Underground detention is proposed. In order for the County to consider allowing detention underground, the applicant must show that detention cannot be done above ground and

	subsequently justify their position. Water Quality, however, must all be done above ground; water quality is not allowed underground
	Response: (R&R) Water Quality is proposed above ground in rain gardens and detention is proposed below ground (shown on C1.01). There is not enough area on site for parking, so a parking reduction is being requested, and a pond would make this problem worse by taking away from the already reduced parking on site. Additionally, the historic low side of the site is the eastern portion near Washington Street. Since two entrances off of Washington St. are proposed for site circulation, the pond would not fit in these areas. Therefore, detention is proposed below grade as shown on C1.01 and C1.02.
ENG5	The development of this site appears to be generating more than twenty (20) Vehicle Trips Per Day. The applicant will be required to submit a Traffic Impact Study (TIS) and may be responsible for roadway improvements (i.e. curb, gutter and sidewalk). The level of TIS required will be determined by criteria identified in Table 8.15 within section 08-02-02 of Chapter 8 of the Adams County Development Standards and Regulations (ADCO DSR).
	Response: The applicant is submitting a Level 3 traffic study in this resubmittal. See attached Level 3 Traffic Impact Analysis Report document. (SSA)
ENG6	Applicant is requesting a reduction in required parking. To help support this request, the County would like to see the implementation of multi-modal transportation infrastructure to accommodate a reduced parking. Improvements include, but are not limited to, a bus shelter with full weather coverage, a new mast arm for east bound traffic signal, vehicle detection for traffic signal, traffic signal cameras, ADA accessible ramps at all four corners of Washington St. and E 73rd Ave., and striping improvements of said intersection including crosswalks.
	Response: Maiker understands this request and could respectfully offer to provide the new eastbound mast arm. We also considered the ADA ramps, but it appears all four corners of Washington already have this feature. We do not see vehicle detection/traffic cameras as a feasible donation for this project due to added cost, coordination, overhead, time, scheduling constraints, liability, and shrinking federal grants/expenditures and tax credit opportunities. The lead times are particularly risky for us if completion of the mast and road improvements become required prior to foundation construction. We are, of course, amenable to including the signal improvements if the County wishes to pay for and coordinate their delivery and installation. **With regards to the bus shelter, Maiker has reached out to RTD's engineering department and received an emailed response on 1/28/2025. Per RTD, they "certainly wouldn't object as along as it was installed in a manner that didn't block access to the stop". Maiker is not opposed to providing this improvement, provided we are allowed access to do so and that this will not hold up our construction schedule in any way. Please advise on whether we need permission from our neighbor or if we can do so entirely though the County. (Maiker)**
	*** Comments ENG7 through ENG11 must be resolved prior to scheduling the Rezoning for hearing with the Board of County Commissioners.***
ENG7	Prior to scheduling the BOCC hearing for PRC2024-00017, the developer is required to submit for review and receive approval of all Construction Documents (CDs), Drainage Report and Drainage Plan, and Traffic Impact Study (TIS). All CDs must meet the requirements of the Adams County Development Standards and Regulations (ADCO DSR). CDs shall include, at a minimum, onsite and public improvements construction plans. The Drainage Report and Drainage Plan must be in accordance with and meet the requirements of Chapter 9 of the ADCO DSR. The TIS must be in accordance with and meet the requirements of Chapter 8 of the ADCO DSR. The CD's, Drainage Report and Drainage Plan, and TIS must all be signed and stamped by a Professional Engineer licensed in the State of Colorado.

	Response: Noted. To be submitted as part of the FDP. (R&R)
ENG8	The applicant/developer shall submit to the Adams County Development Review Engineering division the following items: - Development Engineering Review Application - Development Engineering Review Fee - One (1) electronic copy of all Construction Documents - One (1) electronic copy of the Drainage Report and Drainage Plan - One (1) electronic copy of the Traffic Impact Study The Complete Development Engineering Review (EGR) Application can be found at the following URL: https://adcogov.org/sites/default/files/Development-Engineering-Review.pdf The Development Review fee can be found in the Community and Economic Development Department Fee Schedule, at the following URL: https://adcogov.org/sites/default/files/2022-12/final_2023%20Fee%20Schedule%20Planning_CED%20%28003%29.pdf The Engineering Checklist and Standard Details can be found within Appendix B of the ADCO DSR, at the following URL: https://adcogov.org/appendix-b-engineering-checklists-and-standard-details The Engineering Road Standards can be found within Appendix C of the ADCO DSR, at the following URL: https://adcogov.org/appendix-c-engineering-road-standards
	Response: Noted. To be submitted once those stages of the project have been completed. (R&R)
ENG9	Low Impact Development (LID) features and measures must be shown on the Construction Documents. All construction projects shall reduce drainage impacts to the maximum extent practicable, and implement practices such as: 1. On-site structural and non-structural BMPs to promote infiltration, evapo-transpiration or use of stormwater, 2. Minimization of Directly Connected Impervious Area (MDCIA), 3. Green Infrastructure (GI), 4. Preservation of natural drainage systems that result in the infiltration, evapo-transpiration or use of stormwater in order to protect water quality and aquatic habitat. 5. Use of vegetation, soils, and roots to slow and filter stormwater runoff. 6. Management of stormwater as a resource rather than a waste product by creating functional, attractive, and environmentally friendly developments. 7. Treatment of stormwater flows as close to the impervious area as possible. LID shall be designed and maintained to meet the standards of these Regulations and the Urban Drainage and Flood Control District's Urban Storm Drainage Criteria Manual, Volume 3. Fore more information regarding LID Standards and Regulations, see Section 9-01-03-14 of the ADCO DSR.
	Response: Noted. Drainage analysis to be finalized during construction documents phase. (R&R)
ENG10	Prior to the issuance of any construction or building permits, the developer shall enter into a Subdivision Improvements Agreement (SIA) with the County and provide a security bond for all public improvements.
	Response: Noted. Please email the requested SIA form and advise on any deadlines. Please contact Chuck Christian at cchristian@maikerhp.org (Maiker)

ENG11	Applicant must submit legal descriptions, exhibits, and easement documents for any proposed easements on the site. These documents must be reviewed and approved by Development Engineering and recorded at the Clerk and Recorders Office. The record number along with the book and page number must be shown on the approved site plan.
	Response: Noted. To be submitted once farther into FDP development process. (R&R)

ENV1	The subject parcel is located within the Adams County Mineral Conservation Overlay (MCO) district, the purpose of which is to establish reasonable and uniform limitations, safeguards, and controls for the conservation and wise utilization of natural resources and for rehabilitation of excavated land. Land within this classification is designated as containing commercial mineral deposits in sufficient size parcels and in areas where extraction and rehabilitation can be undertaken while still protecting the health, safety, and welfare of the inhabitants of the area and the County. Although this parcel is located within the MCO district, the parcel is less than 5 acres and previously developed; therefore, the MCO restrictions are not applicable in this case.
	Response: Noted (SSA)
ENV2	The subject parcel is adjacent to the Lower Clear Creek Ditch. The applicant will need to work with the ditch authority if the ditch may be impacted by the proposed project and provide this information to Adams County for review.

ENV3	The following comments apply to applicants proposing food businesses:

	Illness-causing organisms are spread easily to the public through food and beverages. To reduce the risk of food borne illnesses, Adams County Health Department (ACHD) reviews plans for new and remodeled retail food establishments for conformance with the Colorado Retail Food Establishment Rules and Regulations. The applicant shall submit plans for the proposed food establishment to 7190 Colorado Blvd., Ste. 200, Commerce City, CO 80022, along with the appropriate Plan Review Packet found at https://adamscountyhealthdepartment.org/food-license-application.
	Response: Noted, the commercial space is intended to be constructed as Core & Shell as part of this project. The coffee shop and future retail are intended to be completed as a future tenant build-out and under a separate permit. Plans will be provided to ACHD at the appropriate time under the separate building permit. (SSA)
ENV4	Plans must be approved by ACHD before the start of construction; therefore, staff recommends completion of the ACHD plans review before issuance of a building permit for the construction. The applicant may call ACHD's Plan Review at 303-288-6816 to determine requirements and schedule inspections. Instructions for opening a retail food establishment can be found at https://adamscountyhealthdepartment.org/retail-food-licensing.
	Response: Noted, see response above (SSA)
ENV5	The following comments apply to demolition and construction: Exposure to air pollution is associated with numerous health problems including asthma, lung cancer, and heart disease. Construction and traffic in unpaved areas may contribute to increased fugitive dust emissions. Adams County recommends the applicant utilize all available methods to minimize fugitive dust during all phases of construction.
	Response: Noted. (SSA)
ENV6	State air quality regulations require that precautions be taken prior to demolition of buildings to evaluate the presence of asbestos fibers that may present a health risk. If asbestos is present, actions must be taken to prevent their release into the environment. State regulations also address control of ozone depleting compounds (chlorofluorocarbons) that may be contained in air conditioning or refrigerating equipment. The applicant shall contact the Colorado Department of Public Health and Environment Air Pollution Control Division (APCD) at (303) 692-3100 for more information. Additional information is available at http://www.cdphe.state.co.us/ap/asbestos.
	Response: Noted, all state regulations will be followed. (SSA)
ENV7	Buildings constructed prior to 1978 may contain lead paint. The Environmental Protection Agency's (EPA) 2008 Lead-Based Paint Renovation, Repair, and Painting (RRP) Rule (as amended in 2010 and 2011), aims to protect the public from lead-based paint hazards associated with renovation, repair, and painting activities. These activities can create hazardous lead dust when surfaces with lead paint, even from many decades ago, are disturbed, such as during demolition activities. More information can be found at https://www.epa.gov/lead/leadrenovation-repair-and-painting-program-rules and https://www.epa.gov/lead
	Response: Noted. (SSA)
ENV8	A demolition permit is required for fire-damaged buildings to ensure proper removal of debris, utility disconnection, and compliance with safety regulations, even if the structure is completely destroyed by fire. Additionally, an inspection by a licensed engineer may be necessary to assess the structural integrity of the remaining foundation if rebuilding is planned. Proper debris removal and disposal plans must be outlined as part of the demolition permit application. Additional information is available at https://adcogov.org/building-permit-and-contractor-registration.

	Response: Noted, a demolition permit will be obtained at the appropriate stage of the project. (SSA)
ENV9	The applicant/operator shall follow all applicable hazardous materials and waste management regulations to ensure proper management of hazardous materials and waste such that they do not present a significant actual or potential hazard to public health, safety, or environment.
	Response: Noted, all applicable hazardous materials and waste management regulations will be followed. (SSA)
ENV10	The following comments apply to design and are included as recommendations to be considered: The applicant may want to consider crosswalk(s) where pedestrian access and/or sidewalk crosses internal site drive lanes coming off Washington Street, as this pedestrian crossing may not be easily visible to drivers since it is not at a street intersection. The simplest crossing design would be to post signs and provide striping on the pavement. A safer design alternative would be to provide a raised pedestrian crossing, with striping and a contrasting color, to clearly delineate the crossing. The raised crossing will provide the added benefit of slowing traffic and improving driver awareness of the crossing.
	Response: Noted, the team intends to provide striping, lighting, signage, and contrasting color to clearly delineate the crossing. Refer to drawings C1.01 & A1.00. (SSA+R&R)
ENV11	Where public transportation systems exist, direct pedestrian access should be provided to increase transit use and reduce unnecessary vehicle trips, and related vehicle emissions. The pedestrian/bicycle networks should be integrated with the existing and future transit plans for the area.
	Response: Noted, the applicant is providing pedestrian and multi-model path connections from the site to adjacent uses to encourage less vehicular traffic. (SSA) ENV12	The way that buildings are designed impacts health through the materials used and the amount of volatile organic compounds (VOCs) or other harmful chemicals that they contain; the air and water quality; the amount of daylight; and even by encouraging physical activity and social interaction. Adams County encourages the applicant to consider incorporating design standards into the development to ensure a health-promoting environment. The applicant could pursue building certifications such as LEED, WELL Building Standard, Certified Healthy, or Living Building Challenge.

	Response: Noted, applicant is exploring design standards to ensure a health-promoting environment. (SSA)
ENV13	Adams County encourages community designs that make it easy for people to include regular physical activity, such as walking and bicycling, in their daily routines. Because research shows that the way we design our communities can encourage regular physical activity, community plans that incorporate pedestrian and bicycle amenities that support the use of a broader pedestrian and bicycle network are strongly encouraged. Neighborhoods best encourage residents to walk and/or bicycle as part of their daily routine when they contain a system of well-designed and well-lit sidewalks and trails that connect with destinations in and adjacent to the community.
	Response: Noted, see response to ENV 11 above, the applicant is passionate about providing a healthy and supportive community for residents to safely and effectively connect with the adjacent community/ amenities. (SSA)
ENV14	Research shows that people are more likely to use pedestrian amenities when these features are attractive and feel safe. One way to improve the feeling of safety is by providing pedestrian scale lighting. Adams County encourages the use of appropriate lighting in the area and along access routes.
	Response: Noted, pedestrian scale lighting is provided as shown on the photometric plans, sheets E1.10 and E1.20. (SSA)
ENV15	Bicycle parking locations and design should allow for safe access from external roads and sidewalks and to/from buildings and internal pedestrian paths.
	Response: Noted, see response ENV 11 above. See sheets A1.00 & A1.10 for bike parking locations and connections to existing multi-model networks. (SSA)

Access Requirements	
4	Approved access roads must be constructed prior to any vertical construction and/or to combustible materials being delivered to the site, whichever comes first. Temporary access roads are prohibited unless specifically approved by the Fire District. Fire apparatus access must be designed and maintained to support the imposed loads of fire apparatus (i.e. 85,000 lbs), and must have a surface that provides all-weather driving capabilities. Vehicle access shall be provided to within 150 feet of temporary or permanent fire department connections. **Note only.**
	Response: Noted. (SSA)
5	Fire apparatus access roads shall be a minimum of 24' wide or 26' when a hydrant is present or the building exceeds 30' in height. **Note only: Appears to be met on the preliminary plan provided.**

	Response: Noted, a 26' wide fire apparatus access road is provided along the North side of the building, Sheet C1.01 and A1.00. (SSA)
6	Fire apparatus access roads shall be within 150' of all ground level exterior portions of the building. **Note only: Appears to be met on the preliminary plan provided.**
	Response: Noted. (SSA)
7	Any dead-end fire apparatus access road in excess of 150' shall be provided with an approved turnaround. **Note Only: A turn around is required. The reviewed preliminary plan does show an approved turn around.** ***No parking will be allowed along the turn around. Appropriate "No Parking" signage will also need to be posted throughout the site. This will need to be indicated on the engineered civil plans. An auto-turn path analysis utilizing our truck specification (attached) will also be required showing the ease of maneuverability for the turn around.***
	Response: (R&R) Noted "No Parking" signage added to C1.01 and the auto-turn path analysis has been provided to the fire department as a separate exhibit.
8	Any temporary construction or permanent security gates shall be a minimum of 24 feet and a no parking fire lane sign shall be posted on the gate. The gates shall also have a Knox key switch installed for emergency operation if automatic. **Note only.**
	Response: Noted. (SSA)
9	New and existing buildings shall have approved address numbers, building numbers, or approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property. These numbers shall contrast with their background. Numbers shall be a minimum of 4 inches high with a minimum stroke width of 0.5 inch. Please be aware that the size of the number may need to be larger than 4 inches is not clearly visible from the street or road. A temporary sign must be provided if the permanent signage is not yet installed. **Note only.**
	Response: Noted. (SSA)
10	Developments of one- or two-family dwellings where the number of dwelling units exceeds 30 shall be provided with two separate and approved fire apparatus access roads. a. Exceptions: i. Where there are more than 30 dwelling units on a single public or private fire apparatus access road and all dwelling units are equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1, 903.3.1.2 or 903.3.1.3, access from two directions shall not be required. ii. The number of dwelling units on a single fire apparatus access road shall not be increased unless fire apparatus access roads will connect with future development, as determined by the fire code official. b. Where two fire apparatus access roads are required, they shall be placed a distance apart equal to not less than one-half of the length of the maximum overall diagonal dimension of the property or area to be served, measured in a straight line between accesses. This project does not provide two separate and approved fire apparatus access roads and therefore, an approved automatic fire sprinkler system will be required to be installed in the building. We recommend sharing this information with the water district as early as possible to begin planning the underground fire sprinkler supply line.
	Response: Noted, an approved automatic fire sprinkler system will be provided. (SSA)
Fire Protection Water Supply and Hydrants	
11	**Water mains and all required hydrants shall be installed before the delivery of combustible materials to the site**. Hydrants shall be maintained operational at all times thereafter, unless

	alternate provisions for water supply are approved by the Fire District. Any private fire service mains and fire hydrants and all fire sprinkler service lines shall be installed by a State of Colorado Licensed Fire Suppression System Contractor – Underground Contractor and meet the requirements of National Fire Protection Association Standard 24. **Note only.**
	Response: Noted. (SSA)
12	Plans for the underground fire sprinkler service line shall be submitted for review and approval to ACFR. A current list of registered contractors can be found by going to https://www.colorado.gov/dfpc/fire-suppression-system-contractors. Once installed, all underground fire sprinkler service lines must be inspected by an ACFR inspector before covering. **Note only.**
	Response: Noted. (SSA)
13	Unobstructed access to fire hydrants shall be maintained at all times. Fire department personnel shall not be deterred or hindered from gaining immediate access to fire protection equipment or fire hydrants. A 3-foot (radius) clear space shall be maintained around the circumference of fire hydrants. Within that 6-foot diameter circle and within a 6-foot-wide path leading to the 4.5-inch outlet of a hydrant, vegetation shall be no higher than 4 inches above grade. The unobstructed vertical clearance within that 6-foot circle and 6-foot approach path shall not be less than 7 feet, unless otherwise approved by the Fire District. **Note only.**
	Response: Noted. (SSA)
14	A fire hydrant shall be located within 400' (un-sprinklered building) or 600' (fully sprinkled building) of all ground level exterior portions of the building. **Fire hydrants are not shown on the reviewed preliminary plan. Fire hydrants will need to be shown on the engineered civil plans.**
	Response: (R&R) **Currently confirming with fire department if a new hydrant is required, or if the two existing hydrants within 600' of the site will suffice. Hydrants will be shown on engineered civil plans. Coordination ongoing since 1/24/25.**
15	The number and distribution of fire hydrants is based on the required fire flow. You may refer to Appendix C of the 2018 IFC for guidance.
	Response: (R&R) **Per the fire department's calculations in comment 16, 1 hydrant will suffice. Coordination is ongoing to confirm this.**
16	Fire hydrants are not shown on the reviewed preliminary plan. Fire hydrants will need to be shown on the engineered civil plans. Plans indicate the construction type for the proposed building will be of IA and the building is 135,997 square feet in size. The required fire flow for the building is 4,000 GPM @ 20 PSI. A fire flow reduction is allowed because the building will be equipped with an approved automatic fire sprinkler system. With the fire flow reduction, the required fire flow is 1,000 GPM and hydrants are to be spaced as required in code section C102.1.
	Response: (R&R) **Noted.**
Automatic Fire Sprinkler System	
17	As stated in the 2018 International Fire Code as adopted and amended by Adams County, an approved automatic fire sprinkler system is REQUIRED.
	Response: Noted. (SSA)

PROJECT DESCRIPTION

A 5-STORY MIXED-USE DEVELOPMENT CONTAINING GROUND LEVEL COMMERCIAL SPACE INCLUDING SPACE FOR A FUTURE BOYERS COFFEE SHOP, RESIDENTIAL LOBBY, AND COVERED PARKING, WITH PERMANENTLY AFFORDABLE HOUSING ON THE UPPER FLOORS. THE AFFORDABLE HOUSING WILL CONSIST OF APPROXIMATELY 117 PERMANENTLY AFFORDABLE 1 & 2 BEDROOM FOR RENT APARTMENT UNITS. RESIDENTIAL AMENITIES WILL INCLUDE TWO ELEVATED COURTYARDS, A FITNESS ROOM AND ROOF TOP AMENITY DECK.

PROJECT INTENT

MAIKER HOUSING PARTNERS PROPOSES TO REZONE THE SITE TO PUD ZONING AND DEVELOP THE SITE INTO A MIXED-USE DEVELOPMENT CONTAINING GROUND LEVEL COMMERCIAL SPACE FOR A FUTURE BOYERS COFFEE SHOP WITH PERMANENTLY AFFORDABLE HOUSING ON THE UPPER FLOORS. THE PROJECT WILL BE A NEW COMMUNITY HUB AND GATEWAY FOR THE WELBY NEIGHBORHOOD OF ADAMS COUNTY, IN SUPPORT OF THE GOALS AND VISION ESTABLISHED IN THE **WELBY SUBAREA PLAN**. THE PROJECT WILL CELEBRATE THE HISTORY OF THE SITE BY INCORPORATING HISTORIC ELEMENTS OF THE 1927 SCHOOLHOUSE AND CONTINUE THE RICH TRADITION OF THE BOYERS COFFEE SHOP AS A COMMUNITY HUB AND MEETING PLACE.

THE PURPOSE AND OBJECTIVE OF A PLANNED UNIT DEVELOPMENT (P.U.D.) IS TO ENCOURAGE THE DEVELOPMENT OF LAND AS A SINGLE UNIT. A P.U.D. ALLOWS GREATER FLEXIBILITY IN THE DESIGN OF A DEVELOPMENT, MORE VARIETY AND DIVERSIFICATION IN THE RELATIONSHIPS BETWEEN BUILDINGS, OPEN SPACES AND USES, AND CONSERVATION AND RETENTION OF HISTORICAL AND NATURAL TOPOGRAPHIC FEATURES WHILE MEETING THE GOALS, POLICIES AND OBJECTIVES OF THE COMPREHENSIVE PLAN.

PROJECT CHARACTER – GENERAL

THE NEW PROPOSAL WILL CREATE A VIBRANT, PERMANENTLY AFFORDABLE RESIDENTIAL OPTION FOR ADAMS COUNTY RESIDENTS. THE SITE'S VICINITY TO DOWNTOWN DENVER AND PROXIMITY TO MASS TRANSIT OPTIONS AND THE CLEAR CREEK TRAILWAY MAKE IT A PERFECT OPPORTUNITY TO BEGIN TO IMPLEMENT THE STRATEGIES IDENTIFIED IN THE **WELBY SUBAREA PLAN**. WHEN IMPLEMENTED IN 2014, THE STATED GOAL OF THE DOCUMENT WAS TO BUILD ON AND TRANSFORM THE EXISTING ASSETS, REINVEST, AND MAINTAIN A VIBRANT COMMUNITY THAT ATTRACTS INVESTMENTS FROM BOTH INSIDE AND OUTSIDE WELBY. THE NEW WELBY PROPOSAL UNDER REVIEW WILL NOT ONLY RE-ESTABLISH A WELL-LOVED COMMUNITY ASSET IN THE BOYERS COFFEE SHOP, BUT IT WILL ALSO HELP MEET ADAMS 'S COUNTY'S AFFORDABLE HOUSING GOALS, A RESIDENTIAL BUILDING MANAGED AND DELIVERED VIA MAIKER HOUSING PARTNERS.

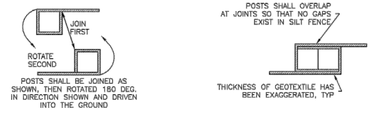
SILT FENCE



SECTION A

SF–1. SILT FENCE

SILT FENCE INSTALLATION NOTES

1. SILT FENCE MUST BE PLACED AWAY FROM THE TOE OF THE SLOPE TO ALLOW FOR WATER PONDING. SILT FENCE AT THE TOE OF A SLOPE SHOULD BE INSTALLED IN A FLAT LOCATION AT LEAST SEVERAL FEET (2–5 FT) FROM THE TOE OF THE SLOPE TO ALLOW ROOM FOR PONDING AND DEPOSITION.

2. A UNIFORM 6" X 4" ANCHOR TRENCH SHALL BE EXCAVATED USING TRENCHER OR SILT FENCE INSTALLATION DEVICE. NO ROAD GRADERS, BACKHOES, OR SIMILAR EQUIPMENT SHALL BE USED.

3. COMPACT ANCHOR TRENCH BY HAND WITH A "JUMPING JACK" OR BY WHEEL ROLLING. COMPACTION SHALL BE SUCH THAT SILT FENCE RESISTS BEING PULLED OUT OF ANCHOR TRENCH BY HAND.

4. SILT FENCE SHALL BE PULLED TIGHT AS IT IS ANCHORED TO THE STAKES. THERE SHOULD BE NO NOTICEABLE SAG BETWEEN STAKES AFTER IT HAS BEEN ANCHORED TO THE STAKES.

5. SILT FENCE FABRIC SHALL BE ANCHORED TO THE STAKES USING 1" HEAVY DUTY STAPLES OR NAILS WITH 1" HEADS. STAPLES AND NAILS SHOULD BE PLACED 3" ALONG THE FABRIC DOWN THE STAKE.

6. AT THE END OF A RUN OF SILT FENCE ALONG A CONTOUR, THE SILT FENCE SHOULD BE TURNED PERPENDICULAR TO THE CONTOUR TO CREATE A "J-HOOK." THE "J-HOOK" EXTENDING PERPENDICULAR TO THE CONTOUR SHOULD BE OF SUFFICIENT LENGTH TO KEEP RUNOFF FROM FLOWING AROUND THE END OF THE SILT FENCE (TYPICALLY 10' – 20').

7. SILT FENCE SHALL BE INSTALLED PRIOR TO ANY LAND DISTURBING ACTIVITIES.

SILT FENCE MAINTENANCE NOTES

1. INSPECT BMPs EACH WORKDAY, AND MAINTAIN THEM IN EFFECTIVE OPERATING CONDITION. MAINTENANCE OF BMPs SHOULD BE PROACTIVE, NOT REACTIVE. INSPECT BMPs AS SOON AS POSSIBLE (AND ALWAYS WITHIN 24 HOURS) FOLLOWING A STORM THAT CAUSES SURFACE EROSION, AND PERFORM NECESSARY MAINTENANCE.

2. FREQUENT OBSERVATIONS AND MAINTENANCE ARE NECESSARY TO MAINTAIN BMPs IN EFFECTIVE OPERATING CONDITION. INSPECTIONS AND CORRECTIVE MEASURES SHOULD BE DOCUMENTED THOROUGHLY.

3. WHERE BMPs HAVE FAILED, REPAIR OR REPLACEMENT SHOULD BE INITIATED UPON DISCOVERY OF THE FAILURE.

4. SEDIMENT ACCUMULATED UPSTREAM OF THE SILT FENCE SHALL BE REMOVED AS NEEDED TO MAINTAIN THE FUNCTIONALITY OF THE BMP, TYPICALLY WHEN DEPTH OF ACCUMULATED SEDIMENTS IS APPROXIMATELY 6".

5. REPAIR OR REPLACE SILT FENCE WHEN THERE ARE SIGNS OF WEAR, SUCH AS SAGGING, TEARING, OR COLLAPSE.

6. SILT FENCE IS TO REMAIN IN PLACE UNTIL THE UPSTREAM DISTURBED AREA IS STABILIZED AND APPROVED BY THE LOCAL JURISDICTION, OR IS REPLACED BY AN EQUIVALENT PERIMETER SEDIMENT CONTROL BMP.

7. WHEN SILT FENCE IS REMOVED, ALL DISTURBED AREAS SHALL BE COVERED WITH TOPSOIL, SEEDED AND MULCHED OR OTHERWISE STABILIZED AS APPROVED BY LOCAL JURISDICTION.

(DETAIL ADAPTED FROM TOWN OF PARKER, COLORADO AND CITY OF AURORA, NOT AVAILABLE IN AUTOCAD)

ROCK SOCK MAINTENANCE NOTES

1. INSPECT BMPs EACH WORKDAY, AND MAINTAIN THEM IN EFFECTIVE OPERATING CONDITION. MAINTENANCE OF BMPs SHOULD BE PROACTIVE, NOT REACTIVE. INSPECT BMPs AS SOON AS POSSIBLE (AND ALWAYS WITHIN 24 HOURS) FOLLOWING A STORM THAT CAUSES SURFACE EROSION, AND PERFORM NECESSARY MAINTENANCE.

2. FREQUENT OBSERVATIONS AND MAINTENANCE ARE NECESSARY TO MAINTAIN BMPs IN EFFECTIVE OPERATING CONDITION. INSPECTIONS AND CORRECTIVE MEASURES SHOULD BE DOCUMENTED THOROUGHLY.

3. WHERE BMPs HAVE FAILED, REPAIR OR REPLACEMENT SHOULD BE INITIATED UPON DISCOVERY OF THE FAILURE.

4. ROCK SOCKS SHALL BE REPLACED IF THEY BECOME HEAVILY SOILED, OR DAMAGED BEYOND REPAIR.

5. SEDIMENT ACCUMULATED UPSTREAM OF ROCK SOCKS SHALL BE REMOVED AS NEEDED TO MAINTAIN FUNCTIONALITY OF THE BMP, TYPICALLY WHEN DEPTH OF ACCUMULATED SEDIMENTS IS APPROXIMATELY ½ OF THE HEIGHT OF THE ROCK SOCK.

6. ROCK SOCKS ARE TO REMAIN IN PLACE UNTIL THE UPSTREAM DISTURBED AREA IS STABILIZED AND APPROVED BY THE LOCAL JURISDICTION.

7. WHEN ROCK SOCKS ARE REMOVED, ALL DISTURBED AREAS SHALL BE COVERED WITH TOPSOIL, SEEDED AND MULCHED OR OTHERWISE STABILIZED AS APPROVED BY LOCAL JURISDICTION.

(DETAIL ADAPTED FROM TOWN OF PARKER, COLORADO AND CITY OF AURORA, COLORADO, NOT AVAILABLE IN AUTOCAD)

NOTE: MANY JURISDICTIONS HAVE BMP DETAILS THAT VARY FROM UDFCD STANDARD DETAILS. CONSULT WITH LOCAL JURISDICTIONS AS TO WHICH DETAIL SHOULD BE USED WHEN DIFFERENCES ARE NOTED.

NOTE: THE DETAILS INCLUDED WITH THIS FACT SHEET SHOW COMMONLY USED, CONVENTIONAL METHODS OF ROCK SOCK INSTALLATION IN THE DENVER METROPOLITAN AREA. THERE ARE MANY OTHER SIMILAR PROPRIETARY PRODUCTS ON THE MARKET. UDFCD NEITHER NDORSES NOR DISCOURAGES USE OF PROPRIETARY PROTECTION PRODUCTS; HOWEVER, IN THE EVENT PROPRIETARY METHODS ARE USED, THE APPROPRIATE DETAIL FROM THE MANUFACTURER MUST BE INCLUDED IN THE SWMP AND THE BMP MUST BE INSTALLED AND MAINTAINED AS SHOWN IN THE MANUFACTURER'S DETAILS.

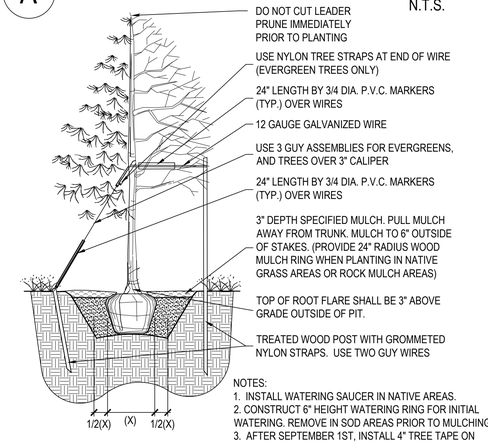
A PLANTING DETAIL FOR ALL TREES & B&B SHRUBS

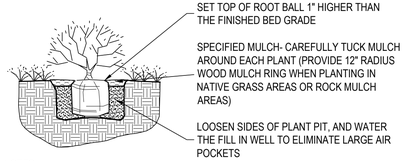
N.T.S.



NOTES:
1. INSTALL WATERING SAUCER IN NATIVE AREAS.
2. CONSTRUCT 6" HEIGHT WATERING RING FOR INITIAL WATERING. REMOVE IN SOD AREAS PRIOR TO MULCHING.
3. AFTER SEPTEMBER 1ST, INSTALL 4" TREE TAPE ON DECIDUOUS TREES FROM 6" OFF THE GROUND TO THE FIRST BRANCH. REMOVE PROMPTLY IN SPRING.
4. COMPLETELY REMOVE WIRE BASKET, ALL TWINE & PLASTIC. REMOVE BURLAP OFF TOP 2/3 OF BALL.
5. FILL PLANT PIT WITH 1/2 SPECIFIED SOIL MIX AND 1/2 PIT SOIL.

B PLANTING DETAIL FOR SHRUBS, AND ALL CONTAINER PLANTS LARGER THAN 1 GALLON

N.T.S.



NOTES:
1. PRUNE ALL DEAD OR DAMAGED BRANCHES PRIOR TO, AND AFTER PLANTING.
2. CRUMBLING OR BROKEN ROOT BALLS WILL BE REJECTED.
3. DIG PLANT PIT TWICE AS WIDE AND HIGH AS CONTAINER.
4. TAKE CARE NOT TO DAMAGE ROOT BALL WHEN REMOVING THE PLANT FROM IT'S CONTAINER.
5. FOR ALL PLANTS IDENTIFIED WITH WATER USE OF "LOW" OR "VERY LOW" ON THE PLANT LIST, KEEP WOOD MULCH 2" BACK FROM TRUNK OR STEM.
6. FILL PLANT PIT WITH 1/2 SPECIFIED SOIL MIX AND 1/2 PIT SOIL.
7. SCORE ROOT BOUND ROOT BALLS TO FREE UP ROOTS.

GENERAL LANDSCAPE NOTES

1. ALL LOW PERENNIAL AND GROUNDCOVER PLANTING AREAS SHALL BE MULCHED WITH SHREDDED WESTERN RED CEDAR WOOD MULCH, AT A DEPTH OF 2". WEED BARRIER FABRIC IS NOT REQUIRED UNDER WOOD MULCH.

2. IN AREAS OF NATIVE SEEDING OR AREAS OF ROCK MULCH, ALL NEWLY PLANTED TREES, SHRUBS AND PERENNIALS SHALL HAVE A RING OF WOOD MULCH INSTALLED AROUND THE BASE OF EACH PLANT. SEE THE PLANTING DETAILS FOR THE SPECIFIC SIZING AND DEPTH OF THE WOOD MULCH.

3. ALL OTHER PLANTING BED AREAS SHALL BE MULCHED WITH 1-1/2" GRAY ROSE MULTI-COLORED RIVER ROCK, AT A DEPTH OF 3", INSTALLED OVER PERMEABLE WEED BARRIER FABRIC. DO NOT INSTALL EDGING BETWEEN WOOD MULCH AND ROCK MULCH AREAS.

4. SOD EDGER SHALL BE 14 GAUGE ROLLED TOP STEEL EDGING (DARK GREEN COLOR) IN THE LOCATIONS SHOWN ON THE PLANS. EDGER IS NOT REQUIRED WHERE SOD ABUTS CONCRETE.

5. ALL AREAS TO BE LANDSCAPED SHALL HAVE ORGANIC AMENDMENTS THOROUGHLY INCORPORATED INTO THE SOIL AT A RATE OF 5 CUBIC YARDS PER 1,000 SQUARE FEET, AND TILLED TO A DEPTH OF 6 INCHES.

6. ALL SOD AREAS, BED AREAS, AND LANDSCAPE AREAS SHALL BE FINE GRADED PRIOR TO INSTALLATION OF NEW PLANT MATERIAL. ROCKS, WOOD, AND ANY MATERIAL LARGER THAN 1" IN DIAMETER SHALL BE REMOVED FROM ALL PLANTING AREAS PRIOR TO SODDING AND PLANTING NEW MATERIALS.

7. ANY EXISTING TURF, SHRUBS, TREES, AND PLANT MATERIAL THAT IS SPECIFIED ON THE PLANS TO BE REMOVED, SHALL BE FULLY REMOVED FROM THE SITE, INCLUDING ALL ROOTS.

8. ALL LANDSCAPED AREAS SHALL BE WATERED BY A FULLY AUTOMATIC UNDERGROUND IRRIGATION SYSTEM.

9. SOD AREAS SHALL BE ZONED SEPARATELY THAN BEDS, AND SHALL BE IRRIGATED VIA POP-UP SPRAY HEADS PROVIDING FULL (HEAD TO HEAD) COVERAGE. HEADS SHALL BE COMMERCIAL GRADE WITH REPLACEABLE NOZZLES, PRESSURE REGULATORS, AND CHECK VALVES.

10. BED AREAS SHALL BE ZONED SEPARATELY THAN SOD AREAS, AND SHALL BE IRRIGATED BY INDIVIDUAL DRIP EMITTERS TO EACH PLANT. DRIP COMPONENTS SHALL BE COMMERCIAL GRADE RAIN-BIRD OR EQUAL POINT SOURCE EMITTERS, WITH ALL PLANTS RECEIVING IRRIGATION.

E. ANY PROPOSED LIGHT FIXTURES INSTALLED ON PRIVATE PROPERTY, ADJACENT TO THE RIGHT OF WAY, SHALL BE ORIENTED IN SUCH A MANNER OR LIMITED IN LUMEN OUTPUT TO PREVENT GLARE PROBLEMS AND SHALL NOT EXCEED NATIONAL IES LIGHTING STANDARDS FOR DISABILITY GLARE.

F. ALL OUTDOOR LIGHTING SHALL HAVE LIGHT SOURCES THAT ARE CONCEALED BY A FULL CUTOFF LIGHTING FIXTURE SO THAT THE LIGHT SOURCE IS NOT VISIBLE FROM ANY STREET RIGHT-OF-WAY OR ADJACENT PROPERTIES. IN ORDER TO DIRECT LIGHT DOWNWARD AND MINIMIZE THE AMOUNT OF LIGHT SPILL INTO THE NIGHT SKY AND ONTO ADJACENT PROPERTIES, ALL LIGHTING FIXTURES SHALL BE FULL CUTOFF LIGHTING FIXTURES.

G. SIGNAGE LIGHTING SHALL BE APPROVED AS PART OF A SEPARATE SIGN PERMIT.

H. LUMINAIRES SHALL BE SHIELDED AND DIRECTED TO AVOID GLARE AND OVERSPILL ONTO ADJACENT PROPERTY.

I. ALL EXTERIOR LIGHT FIXTURES SHALL BE FULL CUTOFF FIXTURES THAT ARE DIRECTED DOWNWARD (90 DEGREES FROM TRUE VERTICAL) AND SHALL HAVE FLAT LENSES, EMITTING NO MORE THAN 10 PERCENT OF THE TOTAL LUMENS BETWEEN 80 AND 90 DEGREES FROM TRUE VERTICAL. FIXTURES SHALL BE CONFIGURED SO THAT LIGHTS DO NOT CAUSE GLARE.

J. ALL LIGHT FIXTURES ON STRUCTURES, POLES, BOLLARDS, STANDS, OR MOUNTED ON A BUILDING SHALL HAVE A SHIELD, ADJUSTABLE REFLECTOR, AND/OR NON-PROTRUDING DIFFUSER TO SHIELD THE LIGHT SOURCE FROM SIGHT FROM ADJACENT RESIDENTIAL ZONING DISTRICTS.

K. MOTION-ACTIVATED SECURITY LIGHTING SHALL BE TIMED TO TURN OFF AFTER NOT MORE THAN FIVE MINUTES AFTER MOTION ACTIVATION.

L. WALL PACKS ON THE EXTERIOR OF THE BUILDING SHALL BE FULLY SHIELDED (E.G., TRUE CUT-OFF TYPE BULB OR LIGHT SOURCE NOT VISIBLE FROM OFF-SITE) TO DIRECT THE LIGHT VERTICALLY DOWNWARD.

M. LIGHT SPILLOVER FROM LEVEL 2 ONTO THE GROUND LEVEL IS REFLECTED IN THE CALCULATION POINTS ON THE SITE PLAN PHOTOMETRIC.

SPECIFICATIONS

CONSTRUCTION
- Die-cast housing with hidden vertical heat fins are optimal for heat dissipation while keeping a clean smooth outer surface
- Corrosion resistant, die-cast aluminum housing with 1000 hour powder coat paint finish
- External hardware is corrosion resistant

OPTICS
- Micro Strike Optics (160, 320, 480, or 720 LED counts) maximize uniformity in applications and provide a comfortable glare rating. Strike optics evenly illuminate the entire luminous surface area to provide a low glare appearance. Catalog logic found on page 2
- Strike Optics (36, 72, 108, or 162 LED counts) provide best in class distributions and maximum pole spacing in new applications with high powered LEDs. Strike optics are held in place with a polycarbonate bezel to mimic the appearance of a flat lens. Micro Strike and Strike optics can be combined on the same application. Catalog logic found on page 3
- Both optics maximize target zone illumination with minimal losses at the house-side, reducing light trespass issues. Additional backlight control shields and house side shields can be added for further reduction of illumination beyond the target zone
- One-piece silicone gasket ensures a weatherproof seal
- Zero up-light at 0 degrees of tilt
- Field rotatable optics

INSTALLATION
- Mounting patterns for each arm can be found on page 11
- Optional universal mounting block for ease of installation using retrofit applications. Available as an option (ASQA3) or accessory for square and round poles
- All mounting hardware included
- Knuckle arm fitter option available for 2-3/8" OD tenon
- For products with EPA less than 1 mounted to a pole greater that 20ft, a vibration damper is recommended

ELECTRICAL
- Universal 120-277 VAC or 347-480 VAC input voltage, 50/60 Hz
- Ambient operating temperature -40°C to 40°C
- Drivers have greater than 90% power factor and less than 20% THD
- LED drivers have output power over-voltage, over-current protection and short circuit protection with auto recovery
- Field replaceable surge protection device provides 20kA protection meeting ANSI/ IEEE C62.41.2 Category C High and Surge Location Category C3; Automatically takes fixture off-line for protection when device is compromised
- Dual Driver option provides 2 drivers within luminaire but only one set of leads exiting the luminaire, where Dual Power Feed provides two drivers which can be wired independently as two sets of leads are extended from the luminaire. Both options cannot be combined

CONTROLS
- Photo control, occupancy sensor programmable controls, and Zigbee wireless controls available for complete on/off and dimming control
- Please consult brand or sales representative when combining control and electrical options as some combinations may not operate as anticipated depending on your application
- 7-pin ANSI C136.41-2013 photocontrol receptacle option available for twist lock photocontrols or wireless control modules (control accessories sold separately)
- 0-10V Dimming Drivers are standard.

Re: Maiker Boyers
Adams County, CO
LSC #240770

Dear Mr. Schneck:

In response to your request, LSC Transportation Consultants, Inc. has prepared this traffic impact analysis for the proposed Maiker-Boyers development. As shown on Figure 1, the site is located south of E. 73rd Avenue and west of Washington Street in Adams County, Colorado.

REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday peak-hour traffic volumes; the typical weekday site-generated traffic volume projections for the site; the assignment of the projected traffic volumes to the area roadways; the projected background and resulting total traffic volumes on the area roadways; the site's projected traffic impacts; and any recommended roadway improvements to mitigate growth in background traffic or from the impact of the site.

LAND USE AND ACCESS

The site is proposed to include about 117 apartment dwelling units, a 2,000 square-foot coffee shop, and about 1,622 square feet of retail space. Signalized access is proposed from Washington Street as shown in the conceptual site plan in Figure 2. A secondary right-out-only access is also proposed further south.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **Washington Street** is a north-south, six-lane major arterial roadway east of the site. The intersections with E. 78th Avenue, E. 76th Avenue, E. 73rd Avenue, E. 71st Avenue, and E.

70th Avenue are signalized with auxiliary lanes and the intersection with E. 74th Avenue is stop-sign controlled. The posted speed limit in the vicinity of the site is 40 mph.

- **E. 78th Avenue** is an east-west, two-lane collector roadway north of the site. The intersection with Washington Street is signalized with auxiliary lanes. The posted speed limit in the vicinity of the site is 35 mph.

- **E. 76th Avenue** is an east-west, two-lane local roadway north of the site. The intersection with Washington Street is signalized with auxiliary lanes. The posted speed limit in the vicinity of the site is 25 mph.

- **E. 74th Avenue** is an east-west, two-lane local north of the site. The intersection with Washington Street is stop-sign controlled. The posted speed limit in the vicinity of the site is 25 mph.

- **E. 73rd Avenue** is an east-west, two-lane local roadway south of the site. The intersection with Washington Street is signalized with auxiliary lanes. The posted speed limit in the vicinity of the site is 25 mph.

- **E. 71st Avenue** is an east-west, two-lane local roadway south of the site. The intersection with Washington Street is signalized with auxiliary lanes. No speed limit is posted.

- **E. 70th Avenue** is an east-west, two-lane collector roadway south of the site. The intersection with Washington Street is signalized with auxiliary lanes. The posted speed limit in the vicinity of the site is 50 mph.

Existing Traffic Conditions

Figure 3 shows the existing traffic volumes, existing traffic control, and lane geometry in the site's vicinity on a typical weekday. The weekday peak-hour traffic volumes and daily traffic counts are from the attached traffic counts conducted by Counter Measures in January, 2025.

2028 and 2045 Background Traffic

Figure 4 shows the estimated 2028 background traffic and Figure 5 shows the estimated 2045 background traffic. The background traffic assumes a one percent annual growth rate based on a comparison of 2020 (28,000 vpd) and 2050 (36,000 vpd) DRCOG projections.

Existing, 2028, and 2045 Background Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay and LOS F is indicative of a high level of congestion or delay. Attached are specific level of service definitions for signalized and unsignalized intersections.

The intersections in the study area were analyzed as appropriate to determine the existing, 2028, and 2045 background levels of service using Synchro. Table 1 shows the level of service analysis results. The level of service reports are attached.

1. **Washington Street/E. 78th Avenue:** This signalized intersection currently operates at an overall LOS "B" during the morning peak-hour and LOS "A" during the afternoon peak-hour and is expected to do so through 2045.

2. **Washington Street/E. 76th Avenue:** This signalized intersection currently operates at an overall LOS "A" during both morning and afternoon peak-hours and is expected to do so through 2045.

3. **Washington Street/E. 74th Avenue/Auto Nation Driveway:** All movements at this stop-sign controlled intersection currently operate at LOS "B" or better and are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2045.

4. **Washington Street/E. 73rd Avenue:** This signalized intersection currently operates at an overall LOS "A" during both morning and afternoon peak-hours and is expected to do so through 2045.

5. **Washington Street/E. 71st Avenue:** This signalized intersection currently operates at an overall LOS "A" during both morning and afternoon peak-hours and is expected to do so through 2045.

6. **Washington Street/E. 70th Avenue:** This signalized intersection currently operates at an overall LOS "D" during both morning and afternoon peak-hours and is expected to do so through 2045.

7. **Washington Street/Right-Out-Only Site Access:** This unsignalized intersection was analyzed only in the total traffic scenarios.

TRIP GENERATION

Table 2 shows the estimated average weekday, morning peak-hour, and afternoon peak-hour trip generation for the proposed site for three separate scenarios based on the rates from *Trip Generation, 11th Edition, 2021* by the Institute of Transportation Engineers (ITE).

The site is projected to generate about 1,686 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 107 vehicles would enter and about 126 vehicles would exit the site. During the afternoon peak-hour, which generally occurs for one hour between 4:00 and 6:00 p.m., about 65 vehicles would enter and about 55 vehicles would exit. These estimates are expected to be reduced due to pass-by traffic as shown in Table 2.

TRIP DISTRIBUTION

Figure 6 shows the estimated directional distribution of the site-generated traffic volumes on the area roadways. The estimates were based on the location of the site with respect to the regional population, employment, and activity centers; and the site's proposed land use.

TRIP ASSIGNMENT

Figure 7a shows the primary site-generated traffic volumes which are the directional distribution percentages (from Figure 6) applied to the trip generation estimate (from Table 2).

Figure 7b shows the passby site-generated traffic volumes from Table 2.

2028 AND 2045 TOTAL TRAFFIC

Figure 8 shows the 2028 total traffic which is the sum of the 2028 background traffic volumes (from Figure 4) and the site-generated traffic volumes (from Figures 7a and 7b). Figure 8 also shows the 2028 total traffic lane geometry and traffic control.

Figure 9 shows the 2045 total traffic which is the sum of the 2045 background traffic volumes (from Figure 5) and the site-generated traffic volumes (from Figures 7a and 7b). Figure 9 also shows the 2045 total traffic lane geometry and traffic control.

PROJECTED LEVELS OF SERVICE

The intersections in the study area were analyzed to determine the 2028 and 2045 total levels of service. Table 1 shows the level of service analysis results for each movement or lane group. The level of service reports are attached.

1. **Washington Street/E. 78th Avenue:** This signalized intersection is expected to operate at an overall LOS "B" during the morning peak-hour and LOS "A" during the afternoon peak-hour through 2045.

2. **Washington Street/E. 76th Avenue:** This signalized intersection is expected to operate at an overall LOS "A" during both morning and afternoon peak-hours through 2045.

3. **Washington Street/E. 74th Avenue/Auto Nation Driveway:** All movements at this stop-sign controlled intersection are expected to operate at LOS "C" or better during both morning and afternoon peak-hours through 2045.

4. **Washington Street/E. 73rd Avenue:** This signalized intersection is expected to operate at an overall LOS "A" during both morning and afternoon peak-hours through 2045. The existing traffic signal pole on the southeast corner should be replaced with a pole and mast arm combination.

5. **Washington Street/E. 71st Avenue:** This signalized intersection is expected to operate at an overall LOS "A" during both morning and afternoon peak-hours through 2045.

6. **Washington Street/E. 70th Avenue:** This signalized intersection is expected to operate at an overall LOS "D" during both morning and afternoon peak-hours through 2045.

7. **Washington Street/Right-Out-Only Site Access:** All movements at this stop-sign controlled intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2045.

95TH PERCENTILE QUEUE LENGTHS

Table 3 shows the existing and projected 95th percentile queue lengths for the signalized intersections. Table 3 also shows the existing and future turn lane lengths.

RECOMMENDED IMPROVEMENTS

Table 4 shows the recommended improvements at Intersections #4 and #6.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

1. The site is projected to generate about 1,686 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, about 107 vehicles would enter and about 126 vehicles would exit the site. During the afternoon peak-hour, about 65 vehicles would enter and about 55 vehicles would exit. These estimates are expected to be reduced by pass-by trips as shown in Table 2.

Projected Levels of Service

2. All of the signalized intersections are expected to operate at an overall LOS "D" or better through 2045 with the recommended improvements.

3. All movements at the unsignalized intersections analyzed are expected to operate at acceptable levels of service during both morning and afternoon peak-hours through 2045.

Conclusions

4. The impact of the Maiker-Boyers development can be accommodated by the existing and planned roadway network with the following recommendations.

Recommendations

5. The recommended improvements are shown in Figures 8 and 9 and Tables 3 and 4.

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual*, Transportation Research Board

SIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

LOS	Average Vehicle Delay sec/vehicle	Operational Characteristics
A	<10 seconds	Describes operations with low control delay, up to 10 sec/veh. This LOS occurs when progression is extremely favorable and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.
B	10 to 20 seconds	Describes operations with control delay greater than 10 seconds and up to 20 sec/veh. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of delay.
C	20 to 35 seconds	Describes operations with control delay greater than 20 and up to 35 sec/veh. These higher delays may result from only fair progression, longer cycle length, or both. Individual cycle failures may begin to appear at this level. Cycle failure occurs when a given green phase does not serve queued vehicles, and overflows occur. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
D	35 to 55 seconds	Describes operations with control delay greater than 35 and up to 55 sec/veh. At LOS D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, and high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	55 to 80 seconds	Describes operations with control delay greater than 55 and up to 80 sec/veh. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent.
F	>80 seconds	Describes operations with control delay in excess of 80 sec/veh. This level, considered unacceptable to most drivers, often occurs with over-saturation, that is, when arrival flow rates exceed the capacity of lane groups. It may also occur at high v/c ratios with many individual cycle failures. Poor progression and long cycle lengths may also contribute significantly to high delay levels.

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual*, Transportation Research Board

UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

LOS	Average Vehicle Control Delay	Operational Characteristics
A	<10 seconds	Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.
B	10 to 15 seconds	Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. The delay could be up to 15 seconds. Left-turning vehicles on the uncontrolled street may have to wait to make their turn.
C	15 to 25 seconds	Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.
D	25 to 35 seconds	This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.
E	35 to 50 seconds	The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. There is a high probability that this intersection will meet traffic signal warrants. The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach.
F	>50 seconds	The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. The only remedy for these long delays is installing a traffic signal or restricting the accesses. The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.
